

Press release 14 November 2022

New mobile-based survey to study the impact of the pandemic and improve responses to future crises

How can we better address current and future crises? "RESISTIRÉ", a mobile app-based survey, will help increase knowledge and understanding of challenges and inequalities stemming from the COVID-19 pandemic.

The EU-funded project RESISTIRÉ is releasing a mobile app-based survey of the same name to study people's attitudes and experiences relating to the pandemic. Users will have the opportunity to answer questions on various topics such as employment, pay and care responsibilities and will be able to see how their experiences compare to others' through dynamic visualisations. New question topics are due to be released in the coming months.

The survey, developed jointly by researchers from the Institute for Ethical AI and the Centre for Diversity Policy Research and Practice at Oxford Brookes University, within the RESISTIRÉ project, aims to help measure and monitor the economic, social and environmental impacts of COVID-19 policies introduced by governments in Europe.

The project's researchers will analyse the data to examine how COVID-19 and its policy and societal responses have potentially exposed groups in Europe to socio-economic risk factors related to identity features (including, race, class, gender identity, sexual orientation, religion, and other identity markers.) The goal is to increase knowledge and understanding of challenges and inequalities to find better ways to address future crises, including through the development of policy.

The app is free to download on <u>iOS</u> and <u>Android</u> devices and also available in <u>web</u> <u>browser</u>. The survey has been translated into 14 languages and any adult residing in the EU27, UK, Turkey, Serbia, and Iceland can participate.
